Eric Yap Wei Lok
ericywl@live.com | ericywl.github.io

SUMMARY

Detail-oriented professional with 5+ years of experience in distributed systems, technical designs, code review etc. Self-directed and able to think through problems and learn new technologies quickly.

EDUCATION

Singapore University of Technology & Design (SUTD) | May. 2016 – Dec. 2019 | Singapore
Bachelor of Engineering, Information Systems Technology and Design

- Relevant courses: Software Engineering, Networking, Cybersecurity, Machine Learning, Blockchain

---

WORK EXPERIENCE

Elastic | Jan. 2025 – Present | Singapore
Software Engineer II (Jan 2025 - Present)

- Maintained and developed new features for APM server (https://github.com/elastic/apm-server)
- Developed new automated test suite to catch version upgrade regressions of APM server
- Contributed in development of Managed APM and Managed OTLP, Elastic's new offerings for managed observability backed by WarpStream (Kafka) resilience

Shopee | Feb. 2020 – Present | Singapore
Senior Software Engineer (Jan 2022 - Oct 2024)

- Designed, developed and maintained order-payment and refund systems in Shopee, with millions of requests per day
- Lowered P95 latency of refund creation from >800ms to <200ms, as well as latency of other refund operations, by designing an event-driven system that enables high consistency and throughput
- Designed brand new order-payment entities to facilitate the ever-changing order-payment requirements in Shopee, and coordinated large scale cross-team data splitting and migration
- Mentored several new hires for their first few months through entry tasks and familiarization of our team's development practices and lifecycle

Software Engineer (Feb. 2020 - Dec 2021)

- Improved user experience by lowering P95 latency of Shopee's Order Details Page (ODP) from >1s to <600ms that is used by millions of users, enabling us to serve more requests with less resources
- Streamlined and compartmentalized the code architecture of ODP to enable faster development
- Lowered processing times of automatic cancellation of unfulfilled orders from >10 hours to <1 hour by designing an asynchronous cancellation system

Continental Automotive | May. 2018 – Sep. 2018 | Singapore
Cybersecurity Research Intern

- Researched on automotive electrical control unit (ECU) bootloader security and developed PoC
- Proposed new ECU secure boot protocol, which was patented by the company

---

TECHNICAL SKILLS

Professional: Go, Python, gRPC, MySQL, Elasticsearch, Redis, Kafka, Git, GitHub CI, Docker, Kubernetes, Terraform, Prometheus, Grafana, Kibana, Systems Design, Microservices, Distributed Systems, Claude AI

Hobbyist: Rust, PostgreSQL, TypeScript, Svelte, TailwindCSS, Solidity
